DAY and EVENING TRAINING SESSIONS!

No need to pre-register!

2nd Tuesday, monthly: 6:00 pm
and
Every Friday: 1:00 pm

300-B Scholl's Lane
Frederick, MD 21701

This hour-long training is available for anyone at risk for overdosing on heroin or prescription pain medication and anyone who may have an opportunity to help someone experiencing an overdose.

You will learn:

- ❖ Types of Opioids
- ❖ How to Recognize, Respond, and Prevent an Opioid Overdose
- ❖ How to administer **naloxone/Narcan@**
- ❖ Resources for Family Members, Friends & Loved Ones

What is naloxone?

It is a prescription medicine that reverses an opioid overdose. It cannot be used to get high and is not addictive. Naloxone is safe and effective; emergency medical professionals and doctors have used it for decades.

How does naloxone help?

Naloxone is an antidote to opioid drugs. Opioids can slow or stop a person's breathing, which causes death. Naloxone helps the person wake up and keeps them breathing.

An overdose death may happen hours after taking drugs. If a bystander acts when they first notice a person's breathing has slowed, or when they can't awaken a user, there is time to call 911, start rescue breathing (if needed) and give naloxone.
