**FOR IMMEDIATE RELEASE:**

**JUNE 18, 2025**

## **Raccoon from near Memorial Park in Thurmont Tests Positive for Rabies.**

**FREDERICK, MD** – On Tuesday, June 17, 2025, the Frederick County Health Department (FCHD) was notified that a raccoon picked up from near Memorial Park in Thurmont, Maryland, tested positive for the rabies virus. Frederick County Animal Control collected the raccoon on Friday, June 13, 2025, following a fight with a dog.

The FCHD reminds residents that wildlife can live in residential areas and recommends avoiding interaction or feeding wild animals. People who may have had contact with this raccoon should consult their health care provider and notify the FCHD's Community Health Services Office at 301-600-3342

If a pet had contact with a wild animal, consult with your veterinarian and notify the FCHD's Environmental Health Office at 301-600-1717.

Rabies is a viral disease that mainly infects mammals and is spread through the saliva of the infected animal, usually by a bite. Symptoms of rabies in animals may include fear of water, excessive salivation, failure to eat or drink, limping, unusually friendly or aggressive behavior, and/or other atypical behaviors such as nocturnal animals emerging during the daytime. The disease is nearly always fatal to humans if infected and no prompt post-exposure treatment is had.

Barry Glotfelty, Director for FCHD's Environmental Health Services, advises, "Mammals can be infected with the rabies virus, so do not touch or play with unknown animals. Also, make sure your pets are vaccinated."

If you or your pets have contact with a stray or wild animal, report it to Animal Control at 301-600-1544.
