Frequently Asked Questions

Question: If I'm pregnant, can I get a COVID-19 vaccine?

Answer: Yes, if you are pregnant, you can receive a COVID-19 vaccine. You might want to have a conversation with your healthcare provider to help you decide whether to get vaccinated. Learn more about [vaccination considerations for people who are pregnant or breastfeeding](#).

Question: I already had COVID-19, should I still get a COVID-19 vaccine?

Answer: Yes, you should be vaccinated regardless of whether you already had COVID-19. That's because experts do not yet know how long you are protected from getting sick again after recovering from COVID-19. Even if you have already recovered from COVID-19, it is possible—although rare—that you could be infected with the virus that causes COVID-19 again. Learn more about [why getting vaccinated is a safer way to build protection](#) than getting infected.

If you were treated for COVID-19 with monoclonal antibodies or convalescent plasma, you should wait 90 days before getting a COVID-19 vaccine. Talk to your doctor if you are unsure what treatments you received or if you have more questions about getting a COVID-19 vaccine.
